The Role of Datasets in AI Platforms

- Data is the “fuel” for AI models
- Key: Make use of datasets as easy as possible!
- 2 examples (work-in-progress)
 - Integration of open and high-quality datasets into AI4EU portal:
<https://www.ai4eu.eu/>
 - Recommendation of datasets in TRUSTS platform:
<https://www.trusts-data.eu/>

AI4EU: Integration of OpenML Datasets

- Smooth integration of external data sources into the platform
- Example - Open machine learning platform OpenML:
<https://www.openml.org/>
- Technical
 - AcumosAI open-source framework offers „DataBroker“ concept to query data from OpenML API and feeds it to AI models
 - Challenge: determine high-quality datasets

AI4EU: OpenML Dataset Selection

3,276 datasets

$(\text{'impact'} \geq 20) \mid \text{'reach'} \geq 20$
& $(\text{'instances'} \geq 100)$

155 high-quality datasets

Thank you!

Take-home message:

easy (i) integration of, and (ii) access to
datasets is key for the success/sustainability of
AI platforms
